LETTERS

- Taylor's hypothesis convection velocities from mass conservation equation (4 pages)**
S. Davoust and L. Jacquin 051701
- The angular velocity of a freely rotating sphere in a weakly viscoelastic matrix fluid (4 pages)**
Kostas D. Housiadas and Roger I. Tanner 051702
- Axis-switching of non-axisymmetric microdroplet ejected from inkjet with an elliptical nozzle (4 pages)**
Dae Hee Kwon and Sang Joon Lee 051703
- Hydrodynamic sorting of microparticles by size in ridged microchannels (4 pages)**
Wenbin Mao and Alexander Alexeev 051704
- Edge states in a boundary layer (4 pages)**
S. Cherubini, P. De Palma, J.-Ch. Robinet, and A. Bottaro 051705
- Close pairs of relative equilibria for identical point vortices (4 pages)**
Tobias Dirksen and Hassan Aref 051706
- Alteration of helical vortex core without change in flow topology (4 pages)**
Clara M. Velte, Valery L. Okulov, and Martin O. L. Hansen 051707

ARTICLES

Micro- and Nanofluid Mechanics

- Modeling of carbon dioxide condensation in the high pressure flows using the statistical BGK approach (15 pages)**
Rakesh Kumar, Zheng Li, and Deborah A. Levin 052001
- Temperature-induced migration of a bubble in a soft microcavity (12 pages)**
Bertrand Selva, Isabelle Cantat, and Marie-Caroline Jullien 052002

Interfacial Flows

- Pinch-off and formation number of negatively buoyant jets (9 pages)**
Ruo-Qian Wang, Adrian Wing-Keung Law, and E. Eric Adams 052101
- A deeper insight into the dip coating process in the presence of insoluble surfactants: A numerical analysis (11 pages)**
Diego M. Campana, Sebastián Ubal, María D. Giavedoni, and Fernando A. Saita 052102
- Steady solutions of inertial film flow along strongly undulated substrates (13 pages)**
P.-K. Nguyen and V. Bontozoglou 052103
- Free-surface liquid jet impingement on rib patterned superhydrophobic surfaces (10 pages)**
D. Maynes, M. Johnson, and B. W. Webb 052104

Instability and Transition

- Double diffusive convection in a porous layer saturated with viscoelastic fluid using a thermal non-equilibrium model (21 pages)**
Anoj Kumar and B. S. Bhadauria 054101

Turbulent Flows

X-ray attenuation measurements in a cavitating mixing layer for instantaneous two-dimensional void ratio determination (14 pages)	
Vincent Aeschlimann, Stéphane Barre, and Samuel Legoupil	055101
Conditional Eulerian and Lagrangian velocity increment statistics of fully developed turbulent flow (7 pages)	
Holger Homann, Daniel Schulz, and Rainer Grauer	055102
A stochastic extension of the approximate deconvolution model (9 pages)	
Nikolaus A. Adams	055103
Scaling of normalized mean energy and scalar dissipation rates in a turbulent channel flow (12 pages)	
Hiroyuki Abe and Robert Anthony Antonia	055104
Velocity field analysis in an experimental cavitating mixing layer (15 pages)	
Vincent Aeschlimann, Stéphane Barre, and Henda Djeridi	055105
Vertical mixing in homogeneous sheared stratified turbulence: A one-dimensional-turbulence study (12 pages)	
Esteban D. Gonzalez-Juez, Alan R. Kerstein, and Lucinda H. Shih	055106
Simultaneous velocity-temperature measurements in the heated wake of a cylinder with implications for the modeling of turbulent passive scalars (10 pages)	
A. Berajeklian and L. Mydlarski	055107
A shallow water model for magnetohydrodynamic flows with turbulent Hartmann layers (11 pages)	
Alban Pothérat and Jean-Philippe Schweitzer	055108

Compressible Flows

Two-dimensional streaming flows in high-intensity discharge lamps (14 pages)	
Thomas D. Dreeben and Gregory P. Chini	056101

Geophysical Flows

Laboratory experiments on two coalescing axisymmetric turbulent plumes in a rotating fluid (10 pages)	
H. Yamamoto, C. Cenedese, and C. P. Caulfield	056601
Combined diffusion-driven and convective flow in a tilted square container (11 pages)	
Michael A. Page	056602

Others

State resolved vibrational relaxation modeling for strongly nonequilibrium flows (9 pages)	
Iain D. Boyd and Eswar Josyula	057101
